

Role Registration and Verification

Role Registration and Verification

One identity, progressive capabilities

There are not three separate login systems.

Buyer

Base verified student capability after institutional identity/eligibility.

Seller activation

Buyer verification + seller onboarding + agreements + store/business setup + payout information + review/approval where required.

Courier activation

Reuse verified identity. Add transport mode and courier-specific evidence.

Transport options:

- walking,
- bicycle,
- motorcycle,
- car.

Walking/bicycle should have lighter onboarding and geographic/package constraints. Motorcycle/car require licence/vehicle evidence appropriate to the production policy.

Staff roles

Hub, Finance, Security, Admin, Incubation etc. are assigned memberships, not self-selected public roles.

Role reuse

If identity verification was already completed for Seller and the same user later activates Courier, reuse what is still valid instead of collecting duplicate sensitive information.
