

Figma Production History

Why Figma became central

As the screen count and role complexity grew, static PDFs were no longer enough. Figma became the intended UI/UX source of truth between product specifications and implementation.

Confirmed design universe

177 screens:

- Access / Authentication — 12
- Shared / Account — 24
- Buyer — 41
- Seller — 25
- Courier — 14
- Campus Hub — 8
- Transfers — 9
- Incubation — 12
- Operations — 17
- Extensions — 15

Production philosophy

Do not draw 177 independent screens. Build:

1. Brand/foundations.
2. Variables/tokens.
3. Core primitives.
4. Marketplace components.
5. Logistics components.
6. Operations components.
7. Role-specific patterns.
8. Screen families.
9. Responsive variants.
10. Interaction states.
11. Motion specifications.
12. Clickable prototype journeys.
13. Developer handoff.

Brand source of truth

The approved Brand Identity controls logo, palette, typography, spacing and visual language.

The design language is soft and restrained, inspired by Plato's visual literacy but not copied. Interaction behaviour is informed by Uber-style task clarity, live status, maps, contextual cards and sheets.

Core design tokens

Known brand direction includes:

- Warm Ivory #FAF8F2
- Vossie Navy #29475B
- Powder Blue #AFCBDE
- Slate Blue #567487
- Pale Sage #DDE5D9
- Nimbus Sans as supporting typeface
- 4 / 8 / 12 / 16 / 24 / 32 spacing rhythm
- 12 px field radius
- 20 px card radius
- approximately 48×48 px minimum touch target goal

Responsive behaviour

- Phone: bottom navigation, sheets, full-screen Reels, QR/camera, courier map.
- Tablet: split/context panels and wider commerce surfaces.
- Desktop: sidebar, multi-column layouts, dense tables, larger operational maps.

Priority prototype journey

Authentication → Marketplace Home → Reels → Listing → Checkout → Payment → Seller → Courier → QR → OTP → Cross-campus/Hub → Incubation → Operations.

Latest Figma work context

Figma production was intended to preserve the Brand Identity and latest architecture, treating older prototypes as reference only when they conflict with newer specifications.
