

Campus Hub and Package Custody

Campus Hub and Package Custody

Campus Hub is the physical custody point inside the Vossie operating model.

Core workflows

- incoming package queue,
- scan/identify package,
- condition check,
- accept/reject/exception,
- custody state,
- ready for collection,
- courier handoff,
- outgoing transfer,
- returns.

QR

Package identifiers/QRs are generated by the backend/system and displayed/printed by the appropriate workflow. Scanning never directly grants a final state without server-side validation.

Custody chain

Every handoff records who/what role, where, timestamp, package/order and state transition.

Example:

Seller → Origin Hub → Local Courier/Transfer → Destination Hub → Courier/Buyer.

Disputes

Custody scans, condition records, OTP delivery and timestamps become evidence for Operations.
