

Full Decision Register

Product

- Vossie is a campus-commerce operating system, not only classifieds.
- Two application families share one backend.
- Buyer/Seller/Courier are capabilities under one verified student identity.
- Operations uses permissioned workspaces rather than one omnipotent admin role.

Identity

- Student number/email format is not authentication.
- Production target: Eduvos/Microsoft institutional federation + existing Authenticator/MFA.
- Prototype: honest sandbox simulation.
- No separate Buyer/Seller/Courier login systems.

Money

- Pilot seller commission: 7%.
- Pilot courier commission: 5%.
- Buyer pays delivery by default.
- Seller/courier can choose automatic or manual payout.
- Funds: Pending → Secured → Available → Payout Processing → Paid Out.
- Full approved refund reverses seller commission; provider processing economics are tracked separately.

Delivery / custody

- QR establishes custody transitions.
- OTP establishes final delivery proof.
- 24-hour post-delivery issue window.
- Product dispute does not automatically cancel courier earnings when delivery itself was successfully completed.

Cross-campus

- Hub-to-hub pooled movement where practical.
- Nearest viable route, not naive geographic hops.
- Manifest + scan for each leg.
- Third-party courier fallback available.
- Long-distance transfer is a separate capability from local student courier work.

Requests

- Buyer Requests are first-class.
- Sellers respond with structured offers.
- Accepted offer becomes normal order/booking.

Inventory

- Dynamic category schemas.
- Core categories: Food & Drinks, Essentials, Fashion & Lifestyle, Services, Rentals, Digital.
- Seller controls price.
- Promotions/specials are structured state, not fake crossed-out pricing.

Digital

- Controlled entitlement/delivery after purchase.
- No public permanent file URLs as the normal model.
- Academic/institutional material receives stronger moderation/ownership handling.

Food

- Any seller can list food; no separate food account type.
- Food listings use stronger transparency, ingredients/allergens, reporting, review and incident handling.
- Do not use “buy at your own risk” as the main trust/compliance model.

Reels

- Dedicated marketplace navigation destination.
- 15–30 second commerce-linked videos.
- Product/service rail and direct actions.
- Not a generic social network.

Seller Studio

- Store setup, listings, availability, timetable assistance, analytics, earnings and business controls.
- Timetable extraction must be confirmed/edited by seller before use.

Incubation

- Seller support and entrepreneurship intelligence, not ordinary seller administration.
- Uses aggregate demand, unmet searches, growth indicators and interventions.

Operations

- Command Center, tickets, disputes, compliance, finance, security, audit, users, listings, hubs, transfers and system health.
- Vossie security dashboard is a platform security view, not a claim to replace a full enterprise SIEM.

UX

- Plato-inspired soft visual literacy, not copying.
- Uber-inspired interaction clarity, not copying.
- Mobile-first Marketplace, desktop-first Operations, shared responsive design system.
- 177-screen universe is design architecture, not first-release scope.

Motion

- Functional motion first.
- Motion.dev/CSS for runtime microinteractions.
- Motion.so optional exported motion only if free credits exist.
- Reduced-motion support is mandatory.

Engineering

- TypeScript/Next.js/React PWA.
- PostgreSQL/Supabase foundation.
- Drizzle/Zod.
- RBAC/capabilities/RLS.
- GitHub monorepo + pnpm/Turborepo.
- Vitest/Playwright.
- GitHub Actions.
- Vercel/Supabase prototype deployment.

Agentic workflow

- ChatGPT Architect.
- Cursor Atlas + specialist agents + Guardian/Medic.
- VS Code Sentinel + review agents + Watchtower/Resolver.
- GitHub/.vossie is durable shared truth.
- No silent direct-to-main autonomous pushes.

Pitch

- 4-minute cinematic origin/team sequence.
- 15–20 minute Danny-led live product demo.
- Vossie dot as recurring motion signature.
